**TUCSON, AZ, August 24** – This week's FDA approval of the first COVID shot was done *without* convening an Advisory Committee, without public comment, and without reporting to the public on safety data from the national VAERS system.

In response to this failure by our federal government, The Arizona based **Truth for Health Foundation**, a 501(c)(3) public charity, is announcing on Thursday, August 26, that it has convened a **Citizens Vaccine Safety Review Board**, chaired by Dr. Peter McCullough, The Foundation's Chief Medical Advisor, and Dr. Paul Alexander, the Foundation's Director of Evidence-based Medicine, both of whom are clinical epidemiologists and international experts with extensive FDA Drug Safety Monitoring experience. The Citizen's Vaccine Safety Review Board will analyze US and international data on vaccine deaths, medical complications and injuries and then report those findings directly to the public.

[Elizabeth Lee Vliet MD](#), *President and CEO of Truth for Health Foundation* said, *"The FDA and CDC agencies have abjectly failed the American people and the world looking to America for guidance. So we the citizens will do their job and report directly to the people."*

Dr. Peter McCullough, Dr. Robert Malone, Dr. Paul Alexander, and Dr. Jane Orient, with Dr. Vliet, spearhead a panel of health care professionals and patients sharing the raw truth about vaccine-injured critically ill patients in hospitals. **This Video Press Conference is being live-streamed August 26 at 12:00 noon ET, USA, by Life Site News, and multiple livestream platforms.**

Transparent feedback to the public will be done via open access reports. The CDC VAERS system, intended for this purpose, has been proved to be seriously flawed and significantly under-reporting vaccine deaths and injuries. Using accepted CDC methods, experts estimate 5 to 15-fold *under-reporting* of C19 vaccine related deaths in VAERS, and 176-fold greater number of reports of deaths in VAERS with COVID-19 vaccines compared to flu vaccines.

New medical risk data and new whistle-blower evidence of urgent significance on vaccine safety, *not reported to the public*, will be disclosed by Truth for Health Foundation medical and scientific advisors in their duty to warn the public of these risks. The new data demonstrates the urgency to STOP THE SHOT until safety data can be independently evaluated and safer alternatives for early treatment of COVID pursued.

Truth for Health Foundation Citizens' Vaccine Safety Review Board calls on the people who have received the vaccine to report adverse events directly to them for ongoing independent data analysis by the international experts on the Foundation's Advisory Council.
