Messages
Taken (blue line) and Read (orange line) over time (Jun 11 to Aug 27). Peaks occur around Jun 11, Jun 25, and Aug 13.

App Versions
Contact Web, Android 4.1.1.48, Android 4.1.1.44, Android 4.1.1.43, Android 4.1.1.42, Android 4.1.1.40, Android 4.1.1.39, Android 4.1.1.38, Android 4.1.1.37, iPhone 4.1.6(29), iPhone 4.1.6(26), iPhone 4.1.6(1), iPad 4.1.6(1)

Contacts
A line chart showing the number of contacts over time (Jun 11 to Aug 27), remaining relatively stable around 200.

Devices
A pie chart showing the distribution of devices: Android (blue), Contact Web (orange), iPad (yellow), and iPhone (purple).

Messages By Group

Group	Taken	%Change	Read	%Change
General Hospital	8	▼ -33%	5	▼ -83%
Mercy Medical Center	0	▼ -100%	0	▼ -100%
MMC Family Dentistry	4	▲ 100%	16	▼ -52%

Transform Properties

Name: Active Directory Import

Mode: Update

Source Properties

Source Type: LDAP

Path: LDAP://CN=Users,DC=MMCNet,DC=info

Filter: (&(objectClass=person)(memberof= CN=ImportGroup,CN=Users,DC=MMCNet,DC=info))

Domain: MMCNet.info

Authenticate

Destination(Contact) Properties LDAP Field (blank for none)

Username: accountName

Display Name: displayName

Email: mail

Phone Number: telephoneNumber

This screenshot shows the 'Contact Importer' configuration page in the miSecure Messages administration interface. The left sidebar lists various administrative sections. The main panel is titled 'Contact Importer' and contains a 'Transform Properties' section. It includes fields for 'Name' (Active Directory Import), 'Mode' (Update), and 'Source Properties' (Source Type: LDAP, Path: LDAP://CN=Users,DC=MMCNet,DC=info, Filter: (&(objectClass=person)(memberof= CN=ImportGroup,CN=Users,DC=MMCNet,DC=info)), Domain: MMCNet.info). Below this is an 'Authenticate' checkbox. To the right, a 'Destination(Contact) Properties' section lists fields for 'Username' (accountName), 'Display Name' (displayName), 'Email' (mail), and 'Phone Number' (telephoneNumber), each associated with an 'LDAP Field (blank for none)' label.

Contact Importer

Administrators have the capability of importing usernames, display names, e-mail addresses and phone numbers for contact creation. This information can come from Active Directory LDAP (Lightweight Directory Access Protocol), SQL, or a delimited text file.

Fingerprint Scanning

Fingerprint scanning has been added as an alternative to the standard alphanumeric passcode to securely access the app.

Email Registration

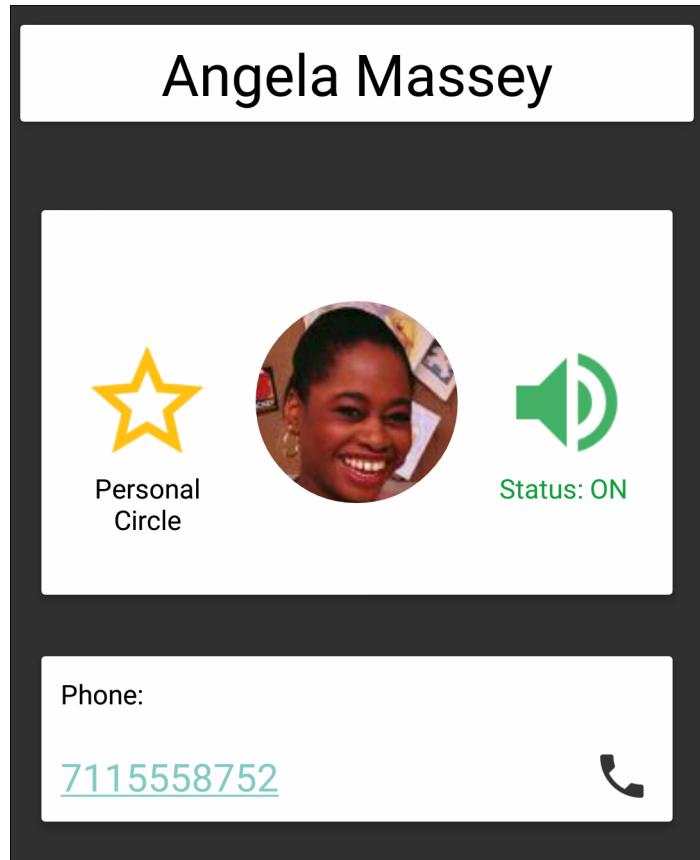

Email Registration is an optional type of registration that is initiated via e-mail. Using this method, only users who receive an e-mail invitation from the administrator will be able to register their app.

The Email Registration process does not require users to know or input a license key, and skips other steps that usually are necessary to register the miSecureMessages app.

>Password and Passcode Expiration

Administrators may set a password and passcode expiration timeframes. This feature helps satisfy security requirements that some organizations have with regards to their users being required to update their passwords periodically.

If a user forgets their password or passcode, the MSM administrator can send them an e-mail message with a hyperlink for them to securely reset their password and passcode. The e-mail messages that are sent to users are customizable in the MSM Administration Web.

Personal Circles

Administrators can allow MSM app users to create a "Personal Circle." The administrator chooses the label that will be displayed on the Personal Circle. The app users can add the contacts they want to their Personal Circle, which will be displayed in their MSM contact list for quickly locating and messaging those contacts.

General		Contacts	Permissions	Phrases	Email Messages
Group:	1				
Name:	General Hospital Group 1				
Licenses:	100				
Account ID:	27.1.6302				
Default Circle:	Global Contacts

Email Registration/Reset Timeout:	600	Minutes	<input type="button" value="▼"/>		
Notification Attempts:	10				
Notification Interval:	1	Minutes	<input type="button" value="▼"/>		
Attachment Size:	10 MB				
Maximum Contacts/Thread:	0 <small>0 = unlimited</small>				

More Per-Group Settings

More system settings are configurable on a per-group basis, including device-to-device messaging, registration type, default notification attempts and interval, and IS Web settings. Also, new features have been added to the Groups tab to customize the maximum number of contacts to whom an MSM user can send a message, and to determine how often passwords and passcodes expire.
