

DARTMOUTH CHILD & ADOLESCENT MEDIA STUDIES

3 TO 17-YEAR-OLD CHILDREN NEEDED

NIH/NSF-Funded Research Studies

We are currently recruiting participants for several studies that seek to understand how children and adolescents process information from visual media, conducted by Drs. Diane Gilbert-Diamond and Jennifer Emond at Dartmouth College.

Please contact us to see if your child is eligible for any of the studies. Depending on the study, participation involves 1-4 visits to our lab at Dartmouth College, each lasting 1-2 hours. All participants will be financially compensated for each visit, and additional mileage reimbursement may be available. Participation is voluntary and confidential.

During the Study:

Your child may watch age-appropriate TV shows.

Your child may perform simple computer tasks

Your child may be offered some foods

You and your child may fill out some questionnaires

We may collect a small amount of your child's saliva to research common genes that are related to health.

We may measure your and your child's height and weight
