

RDCTT & IW Local847
Teams up with the Post Tensioning Institute & JD Steel
To host the Unbonded & Bonded Field Demonstration

On September 15, 2021, the Post Tensioning Institute held its unbonded field demo at IW local847's training facility and on September 16, 2021, PTI held the bonded grouting demo at JD Steels pre-tie yard.

Fabrice Brugere with PT Tech contacted Troy Scoggins at the Phoenix office and requested the use of the facility to conduct hands on Unbonded Post Tensioning training. We were happy to do so. He also asked if we could accommodate him with the facility to conduct grout training. Troy contacted Brian Ellis and presented the question to him, and he volunteered use of the pre-tie yard for the grouting demo.

Fabrice supplied all the materials to do the training and allowed 2 members that work for JD Steel to take the class of grouting. When completed he donated the materials to the training department. Troy and Edmundo also helped with part of the instruction of the class on the use and hands on training of the stressing machine. It was a great opportunity for all involved and there was good feedback from the students.

This was a great opportunity for the training department that may lead to this type of training at other training department locations.
