

## **MDPAC Psychotherapy Training Program**

September 2019 to June 2020

### **Five Experiential Weekends & Five Supervision Group Sessions**

The MDPAC Psychotherapy Training Program is a year-long training course for physicians wishing to develop a focused practice in psychotherapy or to increase their skills in providing psychotherapy in the context of a comprehensive family practice setting.

Each residential weekend will consist of both didactic and experiential components with adequate opportunities for feedback and interaction with presenters and colleagues. Participants are expected to attend each weekend and attend five online group supervision sessions throughout the year.

#### **TESTIMONIALS**

*More aware of my own responses in therapy and impact of transference both directions*

*Building community within the participants*

*It gave me core "soft skills" outside of the specific therapeutic techniques that I need to practice competently, safely, effectively.*
