

MISSION MASTERMIND IMPACT REPORT

The Insider

Exclusive insights on our stories and updates about **HOPE**, **REBUILDING COMMUNITIES**, and **RESILIENCE**.

The Mission Mastermind Report is an update about how we are helping Ukrainians get back on their feet to rebuild their lives and communities.

Because of you, since 2022, we have been saving lives by delivering humanitarian aid to those in need and by extracting the most vulnerable from the front lines. We put your donations into the hands of our trusted Ukrainian nonprofit partners: Allied Extract, Bird of Light Ukraine, Artesans ResQ, and The Mozart Group.

Students learn how to stabilize a lower body joint.

ALLIED EXTRACT

Allied Extract is a trusted partner that identifies global needs, develops relief programs, and executes humanitarian aid and extractions in conflict zones.

- Allied Extract (AE) and Bird of Light Ukraine continue to install heaters and are near completion.
- Oleh, a volunteer, took food to Kutyanka, a shelter for displaced women, children, and the elderly. They are living without electricity; therefore, fresh food and the ability to keep soup or beverages warm in their thermoses are incredibly valuable. His car, sponsored by Krohn Breakthrough Foundation, is being used to help with food and supplies and to deliver items to front-line medical teams.
- Lydia Novruzov, an AE partner, received advanced medical kits that will go with Krohn Breakthrough Foundation on the April 2023 mission to help front-line medics in Ukraine.
- AE continues to work with TDI Medical training to support their program. The students complete a 3-week course and receive certification for field trauma care (similar to EMS training in the U.S.).

Some children, mothers, and grandmothers at Kutyanka after receiving fresh food and thermoses

BIRD OF LIGHT UKRAINE

From feeding thousands of refugees to providing strategic support to single families, Bird of Light operates in Ukraine to respond to the needs of its people, be it heat, clothing, or food.

- 鸟 Bird of Light is buying items such as cots, blankets, and cooking equipment for a community of 80 displaced people in Uzhgorod who have been living in a school gymnasium since March.

ARTESANS RESQ

Artesans ResQ was founded to provide emergency response for injured and diseased people in the conflict in Ukraine.

- 鸟 Artesans ResQ has been getting a 4x4 ambulance stocked and ready to operate in January. After it arrived, they installed equipment, heaters, and generators, ready for immediate use.
- 鸟 They continue to install heaters and are near project completion.
- 鸟 They have been registered as the first World Health Organization EMT specialized cell for medical evacuations and pre-hospital care. These teams respond with standardized care to disasters all over the world.
- 鸟 The team lead is going directly to Dnipro to assess plans for mass evacuations since they are the responsible team for critical care patients. Exciting and groundbreaking days are ahead for success.

Bird of Light Ukraine and Allied Extract continue to install heaters and are near completion.

LITTLE VERONICA'S CHANCE TO HEAL

Veronica is a one-year-old child, who got injured with 50% burn injuries to her face, chest, back, and upper limbs. Her condition was very critical. She had a severe infection but due to a lack of electricity and ongoing attacks, laboratories were not functional, so she could not be treated in Ukraine.

On December 25, the Ministry of Health informed us about her and asked us to plan the entire evacuation. With two ambulances, the extraction medical team included the team lead, two doctors, one ICU nurse, and three paramedics. Everything went well. We put her on a ventilator, but her respiratory parameters rose to an alarming level. We didn't know what had happened.

Everyone got into the emergency roles. After fighting for at least four hours, Veronica was back to normal levels, and we were confident that we could safely transport her. It took two hours of medical preparation to hand Veronica safely over to the plane crew. She arrived in her new hospital bed just an hour and a half later. We trust her care to the doctors and know that Veronica will have the chance to heal her body.
