

March 17, 2020

To Federal, State, and Local Officials:

America’s heating, ventilation, air conditioning, and refrigeration industry is committed to advancing and maintaining the health, safety, productivity, and comfort of the entire nation. While citizens are coping with a variety of unforeseen and unusual restrictions, it is essential that they are able to maintain their HVAC and commercial refrigeration equipment. Aside from providing comfort, this equipment is vital for health and safety in addition to productivity, particularly for air filtration and food and medical supply preservation, especially in this time of quarantine. When equipment fails, technicians must be able to repair or replace it as quickly as possible.

Accordingly, as states and local jurisdictions considering their health crisis travel restriction plans, we respectfully request that HVACR technicians and engineers be considered essential businesses.

Sincerely,

Stephen R. Yurek
President and CEO
AHRI – Air-Conditioning, Heating, and
Refrigeration Institute

Talbot Gee
Chief Executive Officer
HARDI – Heating, Air- Conditioning &
Refrigeration Distributors International

Barton C. James
