PRESS RELEASE

CALLAN MARINE LAUNCHES MARINE CONSTRUCTION DIVISION

Division Provides Turnkey Marine, Civil, and Specialty Construction Services

GALVESTON, TX – March 8, 2021 – Callan Marine recently launched a new Marine Construction Division, providing a broad range of turnkey marine, civil, and specialty construction services along the Gulf Coast.

With an emphasis on serving both public and private clients, Callan Marine has extensive experience coordinating construction projects and completing projects using their vast fleet of construction assets. The Marine Construction Division has the capability to complete projects requiring 110 to 300-ton crane barges, including major marine bulk freight projects, container ship terminals, marina developments, and new dock and pier construction. The Marine Construction Division specializes in pile driving, pier and wharf construction, cofferdams, drilled shaft installations, steel sheet pile structures, and tieback systems.

“This new division is a natural complement to Callan Marine’s lines of service,” stated Maxie McGuire, President of Callan Marine. “We have the knowledge, experience, and capabilities to provide turnkey solutions to our clients and we look forward to leading the way in construction efforts along the Gulf Coast.”

The Marine Construction Division will be led by Greg Harner, a 36-year veteran of the construction and maritime industry. Harner brings experience in infrastructure development for deep-water seaports, port security, resort developments, marine terminals, cruise terminal facilities, and commercial building projects within the U.S. and Caribbean.

Callan Marine’s combination of asset capabilities, experience, and innovation ensures a knowledgeable project team working together with leaderships and engineering partners.

Callan Marine, LTD. is a Texas-based, family-owned dredging and marine construction business founded in 2009. Callan Marine performs dredging projects for both private and public clients by providing services to restore berthing depths for ship docks, navigation channels, or otherwise facilitate transportation in our nation’s waterways.
