

CLINICAL RESEARCH SCIENTIST

Join our mission!

St. Jude is a world-class institution dedicated to breakthrough research and customized care. We are actively recruiting a Clinical Research Scientist in the Department of Epidemiology and Cancer Control. This position offers you the opportunity to coordinate the largest childhood cancer survivorship study in North America.

About the Clinical Research Scientist position:

As a Clinical Research Scientist, you will lead a team in their daily activities to support participant recruitment, data collection, protocol implementation and quality assurance. You will be responsible for working autonomously and looking for ways to continuously improve the study management process.

Responsibilities

- Identify and recruit eligible study participants
- Design and implement complex database queries and reports
- Supervise research coordinators and associates, ensuring compliance with proper research practices
- Coordinate initiatives with principal investigators

Requirements

- MD or a PhD in an appropriate scientific field
- Three or more years of relevant research experience in clinical/population-based outcomes and health behavior research
- Experience must include study design methodology, protocol development, study conduct and analysis

At St. Jude, we have one common goal: **find cures for children with cancer and other life-threatening diseases through research and treatment.**

We seek talented and diverse staff to provide superior care, leading-edge research, and unmatched resources at no cost to the family.
