

Winter is Ice Dam Season

Ice dams can wreak havoc on residences and businesses by:

Damaging walls, ceilings and insulation; and

Leading to the growth of mold and mildew.

Help your client mitigate safety issues, tenant displacement, and business interruption caused by ice dams, with these tips:

Before winter hits, clear your gutters and downspouts of all leaves, sticks, and other debris.

After each storm, remove snow from roofs (any work done from off the ground should be done by a professional). A roof-rake or push broom can be used from the ground but be careful not to damage roof materials!
