Stumble Onto Ataxia

Ataxia is a neurological disease. It is progressive - affecting a person's ability to walk, talk, and use fine motor skills. It can be fatal.

Ataxia causes individuals to appear drunk, since slurred speech and stumbling are symptoms. This is related to degeneration in the part of the brain that controls coordination and movement.

Contact us to learn more.

Ataxia can affect anyone, at any age. Symptom onset and progression varies by person.
