

Environmental Dust Control by Fusion

This is a biodegradable, non-toxic and environmentally safe product derived mainly from sugar beets.

Fusion Dust Control is a cost-effective dust suppressant and soil stabilizer that can be used in a variety of application methods to create a more durable surface with increased load-bearing capacity. Typical materials successfully treated with Fusion Dust Control include soil, aggregate blends and chip-and-seal surfaces.

IDEAL for country driveways, parking lots, construction sites, pond construction.

Product advantages

- ✦ **Fusion Dust Control** works by coating and binding surface material. This treatment rejuvenates with moisture, is easy to maintain, keeps dust particles bound and offers a superior surface, whereas dust control calcium chloride works by holding moisture in the roadbed, resulting in a less stable, even muddy, surface.
- ✦ Fusion Dust Control creates a more flexible surface than encapsulates, which can become brittle, shatter and wash away, polluting the environment.
- ✦ When used on gravel roads, Fusion Dust Control reduces the high cost of adding fresh gravel and frequently grading the road surface.
- ✦ Made with desugared sugar beet juice: biodegradable, non-toxic, environmentally safe.

Derived from sugar beets.
