SPECIAL INVITATION EVENING EVENT

“Digital Denture & 3D Printing – Workflow Mastery” HANDS-ON

Dr. Roger Pham

| Course Director

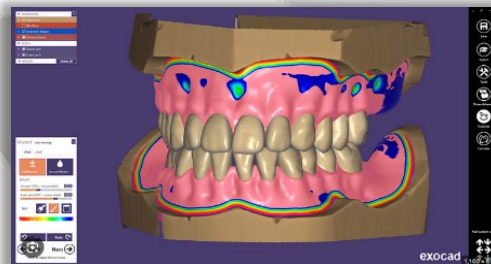

PROGRAM OVERVIEW

This full-day course offers an immersive, hands-on experience focused on mastering the complete digital denture workflow. Building on the foundational concepts introduced in our previous lecture, this course is specifically designed for clinicians who are ready to implement and refine these techniques through real-world practice.

Participants will not only learn the streamlined and practical approach to digital denture fabrication using the latest in intraoral scanning, design software, and 3D printing—but will also **actively practice each step of the workflow** under expert guidance.

The program begins with a concise review of digital dentures and their advantages in modern clinical workflows. From there, attendees will engage in guided exercises covering intraoral scanning, denture design, printing preparation, and post-processing. Special attention will be given to clinical efficiency, patient fit, and troubleshooting techniques that ensure predictable outcomes.

The hands-on format allows participants to gain firsthand experience with digital tools, materials, and workflows—culminating in the fabrication of a complete 3D printed denture model. This course is ideal for dentists who want to confidently integrate digital dentures into their practice and take their removable prosthodontics to the next level.

COURSE OBJECTIVES

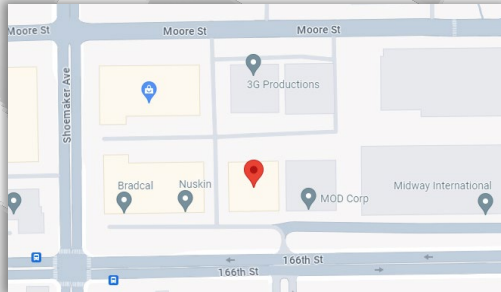

The following topics will be discussed in detail:

- **Introduction to Digital Dentures**
- **Why It Make Sense!**
- **Digital Workflows**
- **Digital Design and Keeping it Simple!**
- **3D Printing -> from Digital to Physical**
- **Digital Denture Workflow Full Hands-on**
