

Ziting Huang is an MPH candidate at Columbia University Mailman School of Public Health, Environmental Health Sciences Department focusing on Molecular Epidemiology. She recently graduated from Duke Kunshan University and Duke University with a dual degree in Bioscience. During the last few years of college, she worked at a molecular biology wet lab, focusing on DNA and protein synthesis. She is currently working on the Center's arsenic study and is excited to conduct community-based fieldwork. The study will explore how climate change and cultural factors impact arsenic exposure and human health.
