

DESBIO Datasheet | hA²cg Evolution

SUPPORTIVE

Supports calorie-restricted weight loss plans

COMPREHENSIVE

Contains 23 targeted homeopathic ingredients

POWERFUL

Temporarily relieves symptoms such as hunger and food cravings and increases menu flexibility

Why hA²cg Evolution?

hA²cg Evolution is a revolutionary, weight-management product designed to support medically supervised calorie-restricted weight loss plans such as the **Evolution Weight-Management Program**.^{*} DesBio isolated two human amino acid chain groups – AACG-A and AACG-B – from the human chorionic gonadotropin molecule and combined them with 21 of the most targeted weight-management homeopathic ingredients available. The result is the most advanced and comprehensive formula ever designed to be used in conjunction with a calorie-restricted diet.

Formulated using homeopathic homochords, **hA²cg Evolution's** comprehensive formula supports the body in relieving symptoms that come with dieting and fat release such as hunger, food cravings, headaches, decreased energy, fatigue, and other common discomforts commonly associated with calorie-restricted diets.

Why are AACG-A AND AACG-B the Best Option for Calorie-Restricted Weight-Management Support?

Scientific research has shown that large protein molecules have smaller amino chain groups that actually perform the biological actions. For example, scientists have known for quite some time that in protein molecules such as angiotensin, which is composed of 452 amino acids, only the first twelve are active.¹ The two amino chain groups in **hA²cg Evolution**, AACG-A and AACG-B, have been isolated from the human chorionic gonadotropin molecule. Scientific evaluation has shown that the A chain group (containing 92 amino acids) and the B chain group (containing 145 amino acids) have the most potent effects on metabolism and appetite and provide optimal support for a calorie-restricted weight-management program. **hA²cg Evolution** contains bioidentical active amino acid chain groups that have been naturally found in the hCG molecule.

These two bioidentical amino acid groups provide a more direct route to supporting patient adherence to a medically supervised calorie-restricted diet by:

- Supporting and regulating hypothalamic activity
- Homeopathically triggering a more effective response from the body by relaying a focused message from two compact and precise molecules (AACG-A and AACG-B)
- Increasing the menu flexibility of the traditionally rigid calorie-restricted diets
- Temporarily relieving hunger and food cravings
