

Facial and Body Rejuvenation Using Minimally Invasive Techniques

Everything about our skin changes as we age, from the texture to the tightness.

At EsthetixMD we have more to offer than anyone else in non-invasive and combination therapies. We are excited to announce our new launch of Morpheus8 RF Microneedling as a complement to our Microneedling suite. Morpheus8 and Vivace treatments may restore the natural, youthful appearance of your face, neck, and body. RadioFrequency (RF) Microneedling promotes collagen, elastin and hyaluronic acid production at a much greater level than traditional microneedling. This creates dramatic results at a faster rate with fewer follow up sessions.

You may be wondering; why add another RF Microneedling device?

Morpheus8 non-surgical, FDA-approved, safe, and effective therapy for whole-body skin resurfacing, skin tightening, and persistent fat removal. It employs fractional radiofrequency radiation (RF) to penetrate the skin **deeper** than conventional micro-needling devices, activating the skin's natural healing response to produce skin tightening and lifting as well as coagulate adipose tissue.

Vivace® Microneedling, which is FDA-approved for your safety, is a minimally invasive therapy that has been demonstrated to be successful in relieving facial wrinkles, fine lines, and tightening and toning the face, neck, and hands. While it can also be used on the Body, the skin on body areas tends to be thicker, and the results not as noticeable. Vivace is an innovative, best-in-class Microneedling RF device intended for an unparalleled, pleasant patient experience.

In summary, while Vivace's technology with its 70-watt RF distributor and 36 gold plated insulated needles is ideal for the face and neck, Morpheus8's up to 8 millimeter needles provide unparalleled depth giving a more dramatic result for areas such as the abdomen, thighs, arms, knees and buttocks.

We combine both treatments with the most recent advancements in numbing cream, treatment serum, and recovery care to produce an ideal patient experience that will discourage you from considering other more invasive procedures in the future.

Our combination therapy produces the most dramatic effects with little to no pain and no downtime. The benefits are instant and improve over time with numerous sessions. You'll look and feel your best at any age with visible results.

This method has elevated this tried-and-true skin resurfacing procedure to a whole new level. During a personal skin assessment and consultation, we can help you determine which of our combo therapies are ideal for you.
