## SUPERBOWL POOL RAFFLE - HOW IT WORKS

This fund raiser is modeled after a traditional 10x10 grid pool. There are 100 chances on each board. Blocks are \$35 each or 3 for \$100.00.

After the blocks are assigned and before the beginning of the Game, numbers are assigned on each axis of the grid randomly. The AFC team would be on one axis, the NFC team on the other. The numbers are assigned on a RANDOM basis (we draw them out of a bag). It would end up looking something like this:

		AFC									
		3	6	0	9	2	5	8	1	4	7
NFC	2										
	6										
	8										
	7										
	9										
	0										
	4			X							
	1										
	5										
	3										

In the example above, if you had the square with the "X", your numbers would be 4 for the NFC team and 0 for the AFC Team. The numbers represent the last number of the total runs scored during the series. So 24 – 10 would be 4 and 0.

Other points to understand:

This is complete BLIND LUCK. No knowledge of football or sports in general needed.

You are not pulling for either team it's all about your NUMBERS!
