

Collective Culture and American Assimilation: The Necessity of National Identity

Ethan Ruppensburg

The events of 9/11 briefly drew Americans together in pride for their country and united them in a fight to “let freedom ring” that had not been seen since the Revolutionary War. What would America look like if its people sustained that unity, and how much stronger would the United States be? Today, as people continue to pursue their own versions of morality, multiculturalism continues to spread and gain popularity in America, weakening American national identity. The United States must establish a strong national identity to preserve private property, constitutional government, and patriotism in America because multiculturalism undermines these core American values. By voting in leaders who respect these values, who promote them, and who will improve the immigration system, American national identity will prevail, and multiculturalism will fall in America.
