

## **Worm Castings and TEAM**

The fourth season of the History Park Organic Community Garden is underway. All weeds have been cleared and fresh topsoil added. The adding of mulch to the walkways will take place on a group work day in October.

This year we are also adding worm castings to all 92 plots. Worm castings are not a fertilizer. They are an all-natural soil builder made by the earthworm. Because it is a soil builder and not a fertilizer, it transforms soil into a living topsoil. Check out Green Leaf Worm Farm, our supplier, at [www.greenleafwormfarm.com](http://www.greenleafwormfarm.com)

Only 5 plots out of 92 remain open. For further information go to the [Community Garden](#) page on our website.
