

Microcom, the Alaskan communications company with over 30 years in the business, has recently launched Velocity Ku, a new service that provides high speed internet to the furthest reaches of the 49th state. For the first time, Alaskan businesses and homeowners outside of fiber optic, cable, and DSL service areas have access to internet download speeds up to the FCC approved definition for broadband service: **25 megabits per second**.

“Infrastructure in Alaska has always been challenging and expensive, largely due to the size of the state and the nature of the terrain”, says Aaron Brown, Satellite Broadband Manager at Microcom. “The same goes for network infrastructure; providing internet to communities off the beaten path can be expensive. With Velocity, we can deliver high speed internet across the state, at a price people can afford”.

The satellite that powers Velocity Ku is located above meridian 129° W which gives it the rare ability to provide meaningful service to Alaska. Currently, service is available nearly all throughout the state, with only the Aleutian Islands west of Cold Bay being out of the satellite’s service area. Service to the rest of the island chain is expected to be available in 2019.

**“It’s Microcom’s hope that Velocity will create a lot of opportunities for businesses and organizations all over the state”. - Sandra Blinstrubas, Microcom’s co-founder and President**

**BRONZE PLAN**

**10 x 1 Mbps  
Unlimited Data**  
No Data Caps

---

Great for up to 5 users with light to moderate connectivity needs.

Special introductory price  
**\$299/mo**  
Regular price \$349/mo
