

Live Ground Truth™

Banjo, a mission-based technology company, is offering free use, as allowed by law and regulation, of their Live Ground Truth™ platform that delivers critical COVID-19 intel in real time. Solutions include reporting, tracking, and insight into symptoms, testing, capacity in a single central location. This data can then be delivered to federal, state, and local governments, as allowed by law and regulation, and to healthcare providers to significantly reduce response times and deploy resources to reduce loss of life and suffering.

Partners will receive access to 4 general modules:

Live Symptom Map Module

- The ability to view logged symptoms of patients depicted through a heat map and graphs for a given geographical area.

Testing Status Module

- Provides transparency and coordination around test kit availability, quantity, usage, demand, and results.

Capacity Module

- The ability to capture bed and ventilator capacity for hospitals and mobile hospitals for real-time visibility.

Reporting Module

- Provides a visual representation of information, including information contained in surveys, across different healthcare networks in an easy-to-read format where all information is normalized for quick decision making.

All of this is accomplished through an automated process which can be integrated in hours. The platform will automate the new form requested by the Vice President for the National Healthcare Safety Network, while simultaneously improving local communication efforts. The Company is on track to make Live Ground Truth™ HIPAA compliant.

If you are interested in learning more about our COVID-19 Live Ground Truth module, please reach out to COVID@teambanjo.com to schedule a demonstration of the product and discuss solutions in more detail.
