VISION SCREENING RESULTS
RESULTS PRINTOUT ATTACHED

Location of Screening _____

Date of Screening _____

Dear parent or Guardian,

Thank you for allowing your child to take part in the Lions Eye Health Program Screening.

Your child's vision has been screened by the Tega Cay Lions Club with the Welch Allyn SPOT and:

_____ has passed the screening criteria.

_____ screening results indicates that your child should be seen by an eye care professional

Please understand that this is a screening, not a complete eye exam. The Lions Eye Health Program recommends that all children have a complete eye exam performed by an Optometrist or Ophthalmologist. **To help your eye care professional better care for your child, please share these screening results when having your child examined.**

Definitions of the screening results:

Myopia – Myopia means that an individual can see things "OK" from short distances and close-up, but has trouble focusing on distant objects.

 (*Near sightedness*)

Hyperopia – Hyperopia means that an individual can see things "OK" from far away, but has trouble focusing on things up close, such as reading a book. *Far sightedness*)

Astigmatism – Astigmatism will cause blurred vision at any distance. This has to do with the shape of the cornea of the eye which will not allow the light entering the eye to focus at the correct point.

Anisometropia – A condition in which the refractive power of one eye differs from that of the other.

Anisocoria – A condition characterized by a variance in pupil size greater than 1 mm. Affecting 20% of the population, it can be an entirely harmless condition or a symptom of more serious medical problems.

Gaze – A gaze referral means that the eye camera has picked up on strabismus which is an eye turn. The eye with the turn can be either up, down, left, or right. This can be a precursor for amblyopia (lazy eye) which affect 3 – 5% of children.
