### LEFT-ENTRY ONT POST

3F FABRICATION posts are designed for mounting telecommunications equipment in remote locations, trailer home parks, or recreational areas. They are an economical and effective way to secure NIDs and ONTs for both copper and fiber applications.

Universal mounting plates are heavy-gauge steel allowing maximum mounting flexibility with the use of self-drilling screws.

All posts are made with heavy-gauge, mill galvanized steel. The unique U-shaped channel posts provide cable protection, and universal mounting options that accommodate a variety of Network Interface Devices, Optical Network Terminal and Route Markers. Additional cable protection is provided by a 1-1/4" OD x 5' house riser.

- Cable Tie Slots provided in the channel posts help secure cables inside the U-shaped channel.
- All products include mounting hardware or self-drilling screws.
- House Riser included with each ONT post.
