Community Forum Series 2024

Legal Landscapes and Environmental Restoration

TOPICS & SPEAKERS:

Applying Science to meet State Laws and Regulations

Paul Pickett

Environmental Engineer (retired)

Unlike academic research or scientific work for advocacy groups or commercial purposes, science for judging compliance with laws and regulations is constrained and directed by those laws and rules. Paul will talk about his work over the years doing TMDL studies for the State Department of Ecology.

How the Law Can Be Leveraged to Protect and Restore Ecosystems

Patti Goldman

Senior Attorney Earthjustice Northwest

While lawsuits and legal advocacy rarely, in isolation, restore ecosystems, they can be a catalyst for doing so. Patti will talk about how the law has been leveraged to protect and restore rivers and estuaries and the salmon and people that depend on them for their survival and well-being.
