| First Name | Last Name | Briefly describe your research focus | Topic Area | Email | Title/Postion | Institution |
|---|---|---|---|---|---|---|
| Harlan | Fichtenholtz | Influence of affect on cognition and human performance. Measures include behavior, peripheral physiology (ECG, EDA, EMG, etc.), EEG/ERPs, IR Eye Tracking. | Affective neuroscience & performanc | Harlan.Fichtenholtz@keene.edu | Associate Professor | Keene State College |
| James | Kraly | Separation science of biological and environmental complex mixtures, using chromatography and capillary electrophoresis. Also precision optics applications | Analytical separation science | jKraly@keene.edu | Associate professor | Keene State College |
| Kayla | Gallagher | Novice researcher. Currently researching resilience and contributing factors/strategies to grow, interested in student success strategies, and improving patient outcomes (particularly adult populations) | Resilience and student success | Gallagherk@franklinpierce.edu | Instructor - nursing | Franklin Pierce university |
| Victor | Feofilaktov | Endurance performance and exercise physiology | Excersize Physiology | Feofilaktovv@franklinpierce.edu | Assistant Professor | Franklin Pierce University |
| Lisa | Chicko | Cryotherapy for improving symptom management for cancer patients receiving cytotoxic agents, and it's impact on core body temperature | Cancer Symptom Cryotherapy | Chickol@franklinpierce.edu | Assistant Professor nursing | Franklin Pierce University |
| Lisa | Doner | Palynology and reconstruction of environments from lake sediments | Palynology & Paleoenviroment | ladoner@plymouth.edu | Professor | Plymouth State University |
| Shallee | Page | Utilizing mostly funding from NH-INBRE, I do functional genomics using bacteriophages and nematodes. We also do some bioinformatics, mostly genome annotation | Functional Genomics | pages@franklinpierce.edu | Professor of Chemistry and Biology | Franklin Pierce U |
| Diana | Jolles | I am a plant phylogeneticist with a focus on species complexes, cryptic species, reproductive biology (including pollination biology), and conservation. | Plant systematics and conservation | ddv7@plymouth.edu | Associate Professor of Plant Science | Plymouth State University |
| Mark | Scimone | Neurobiology, biomechanics, optics/microscopy, image analysis. I also worked at a prior institution as a light microscopy core facility manager, so I have a lot of experience consulting on microscopy experimental design, sample prep, acquisition, and analysis. | Neurobiology & microscopy methods | mark.scimone@unh.edu | Assistant Professor | University of New Hampshire - Manchester |
| Simon | Pendleton | As a researcher, I am interested in how the cryosphere and landscape systems evolve together over a range of spatial and temporal scales, and how climate can both force and be forced by these interactions in the past, present, and future. This includes paleoclimate and paleoenvironmental investigations from alpine glaciers to rivers to lakes (and much more) as well as field, laboratory, and model-based techniques. Recently I have been working on projects reconstructing temperature and hydroclimate using brGDGTs and dD (respectively), as well as wildfire histories (macroscopic charcoal), glacier activity (cosmogenic exposure dating), and river system change (GIS mapping and paleoflood reconstruction). | Cryosphere Landscape interactions | simon.pendleton@plymouth.edu | Assistant Professor of Practice | Plymouth State University |
| Jesse | Marcum | I am a physical chemist focused on studying the interaction between light and matter. My primary current project involves using spectroscopy to study how fast chemical compounds react sure to exposure to light. Most of this work is performed in direct collaboration with undergraduate student researchers. | Physical chemistry spectroscopy | jesse.marcum@keene.edu | Assistant Professor | Keene State College |
| Mary Kate | Donais | Cultural heritage analysis, portable instruments | Cultural Heritage analysis | Mdonais@anselm.edu | Professor | Saint Anselm College |
| Betsy | Gamrat | Providing, securing and supporting publicly accessible Linux servers for undergraduate education and research | Research Linux infrastructure | Betsy.gamrat@wirehopper.com | Professor | Nashua Community College |
| Victoria | DiBona | Exploring changes in neuro-immune interactions following exposure to environmental toxicants early developmentally in a zebrafish model. | Developmental neuroimmunotoxico | vdibona@anselm.edu | Assistant Professor | Saint Anselm College |
| Douglas | Kerr | Our current research is on the effects and reactions of seagrass meadows to thier local environment and ecosystem. | Seagrass root microbiomes | dkerr_ug@nec.edu | Biology Major & Geodetic Specialist | New England College |

| | | | | | | |
|---|---|---|---|---|---|---|
| Jim | Newcomb | Institutionally, I am the Co-Director for the Center for Undergraduate Science Research and I am a co-PI for the NH-LIFT grant. Individually, I do research on the neurobiology and physiology underlying behavior and regeneration, using nudibranchs as a model system. | Invertebrate neuro-regeneration | jnewcomb@nec.edu | Dean of Science, Health & Exercise Division | New England College |
| Eric | Hoffman | Atmospheric Science, UG research, I'm the PSU rep to the UNH Research Advisory Council. | Atmospheric Science | ehoffman@plymouth.edu | Professor, NH Lift Co-PI | Plymouth State University |
| Ian | Durham | These days my primary area of research interest centers around the intersection of quantum mechanics, AI, and consciousness and agency. In addition I do some work in relativistic quantum information and I also run a quantum optics lab. | Quantum Foundations and AI | idurham@anselm.edu | Professor of Physics | Saint Anselm College |
| Steve | Fiering | I am PI of NH Inbre, my own research is tumor immunology | Tumor immunology | fiering@dartmouth.edu | professor microbiology and immunology | dartmouth geisel school of medicine |
| Diane | Fallier | Our research was to set up a machine that could be used for further research | Research instrumentation setup | dfallier@ccsnh.edu | Professor | Nashua Community College |
| Derk | Wierda | I serve as the PI for our NH-INBRE Research Training grant. I am an inorganic chemistry who studies model catalytic systems especially with biological or environmental applications. | Inorganic catalysis | 24wierp@orcsd.org | Professor | Saint Anselm College |
| Sarah | Glenn | I am involved in research design and implementation of plans to which the research design leads for the Coriglia Excavation Project, an archaeological excavation outside of Orvieto, Italy. | Excavation and archeology | sglenn@anselm.edu | Associate Professor | Saint Anselm College |
| Kevin | Doran | I am a faculty member who conducts social science research and oversees undergraduate research. | Social Science | Kdoran@anselm.edu | Associate Professor | Saint Anselm College |
