

WHY BREASTFEED?

Breastmilk is the best food you can provide your baby.

- ✓ Breastmilk is always changing and is customized depending on what nutrients your baby needs at that time. When you put your baby to breast, your body reads what your baby needs through their saliva.
- ✓ Easy for baby to digest- breastmilk is human milk for human babies.
- ✓ Always ready and available.
- ✓ Strengthens baby's immune system.
- ✓ May reduce the risk of SIDS.
- ✓ Breastfed babies have a decreased risk of obesity, diabetes, and other diseases.
- ✓ Breastfeeding helps you recover faster after childbirth and can help you lose weight faster.
- ✓ Breastfeeding helps reduce your risk of ovarian cancer, breast cancer and diabetes.
- ✓ Breastfeeding increases your calmness, self esteem and confidence.
