

CDC-RECOMMENDED VACCINES FOR ADOLESCENTS

11-12 Years

HPV (2 doses,
can begin at age 9)
MenACWY (dose 1)¹
Tdap
Flu (annual)
COVID-19 (annual)²

13-15 Years

Catch up on
missing vaccines
Flu (annual)
COVID-19 (annual)²

AGES

16 Years

MenACWY Booster¹
MenB³
Flu (annual)
COVID-19 (annual)²

17-18 Years

Catch up on
missing vaccines
Flu (annual)
COVID-19 (annual)²

¹The MenACWY vaccine is recommended for all preteens (ages 11-12). Since protection decreases over time, a booster shot is recommended at age 16.

²One or more doses of the current COVID-19 vaccine depending on health status/prior vaccination history.

³MenB vaccine is a two-dose vaccine recommended for ages 16-18. A MenABCWY vaccine is an option — preteens and teens who are getting MenACWY and MenB vaccines at the same visit can receive MenABCWY vaccine instead. Talk to your healthcare provider about which vaccine is most appropriate for you.
