

Dr. Bradford Edgren has been issued a patent from the United States patent office on an orthodontic appliance; “Orthodontic Lock with Flange”. The appliance is currently in production by Rocky Mountain Orthodontics, based out of Denver, CO and is available nationally and internationally. He has published numerous articles on orthodontics in peer reviewed journals and lectures internationally. Dr. Edgren will lecture at the annual meeting of the American Orthodontic Society in September; in Washington DC. Edgren is a board certified orthodontist in Greeley, CO.

The “orthodontic lock with flange” is an accessory orthodontic appliance that can be positioned along orthodontic archwires using the incorporated set screw. It is used to stabilize and lock archwires in place, preventing them from shifting. Orthodontic elastics can be attached using the flange as well as energy chains to move teeth into proper position.
