

PROJECT ALERT

VITRAN MAINTENANCE & OPERATIONS FACILITY

Island: St. Croix

SUMMARY:

The Department of Public Works (DPW) is pleased to provide the public with an update on the ongoing progress of the VITRAN Maintenance & Operations Facility on St. Croix, U.S. Virgin Islands.

DPW contractor – D.V.D. Construction, Inc. – continues to make progress on the approximately 14,950-square-foot facility, which will serve as VITRAN's primary operating and maintenance facility on St. Croix. The facility will include operations and administrative offices, four maintenance bays, a bus wash, and tire storage.

Construction continues to advance, with all windows and interior ceiling grid now installed, along with the diffusers and connections to the main ductwork. The site has also been cleared of construction debris. The project is currently awaiting the electrical permit, with the necessary electrical fixtures already purchased and ready for installation once the permit is received. Meanwhile, the overhead doors are scheduled for delivery next week, allowing work to continue on additional components of the facility.

DPW and its contractor remain committed to advancing the project toward completion and delivering a modern facility to support VITRAN's operations and maintenance needs on St. Croix.
