In 2018, OPSA launched an effort to develop of a quantitative system-dynamic model of the opioid crisis to help FDA a) understanding the complexity of the interconnected mechanisms of the crisis, and b) assess potential impacts (intended and unintended) of possible policy actions to address the crisis. In Sept 2019, OPSA awarded a 1-year cooperative agreement (Harvard/Mass General; FDA's RFA-FD-19-026) to complete an initial version of the model ready for policy analysis, and in Aug 2020, OPSA awarded a 1-year cooperative agreement (Harvard/Mass General; FDA's RFA-FD-20-031) to account for societal outcomes beyond overdose as well as cost-effectiveness of potential policies. The current proposal will expand the FDA's model to more comprehensively incorporate fentanyl, stimulants and polysubstance use and their interactive effects on opioids use, misuse, addiction, use disorder treatment, and associated outcomes. The main focus of this project would be on modeling the growing number of opioid overdose deaths involving people who are primarily stimulant or polysubstance users, as an important emerging aspect of the opioid crisis. The research will also include quantification of the effects of harm reduction approaches (e.g., naloxone distribution to opioid users, increasing treatment availability for Opioid Use Disorder [OUD]) on overdoses involving fentanyl and other polysubstance use. Additionally, the research will identify and incorporate aspects of mental health that are feasible for inclusion into the model.

The HHS Office of Minority Health is offering funding to support State and local collaborative teams in implementing a methodological framework and strategies for assessing and addressing structural racism in health policies, developed through a complementary policy academy initiative. In particular, awardees will: (1) Obtain governmental and public buy-in for engaging in this policy collaborative endeavor; (2) Create a multi-sector team (e.g., comprised of leadership from the governor's/mayor's office and health, behavioral health, child welfare, justice, education, commerce, community service and other agencies, and from community organizations); (3) Conduct a review of existing policies to identify the areas primed for a structural racism assessment; (4) Develop or revise a policy (or policies) to address structural racism and improve health outcomes; (5) Implement the new/revised policy and evaluate its impact on health outcomes for racial and ethnic minorities within their jurisdiction; and (6) Create and implement strategies to communicate, sustain and spread policies resulting in improved health outcomes for racial and ethnic minorities. BACKGROUND: Racial and ethnic minority populations experience a number of disparities which

contribute to poor health outcomes. Structural racism, evidenced in residential segregation, inequitable allocation and quality of services and resources such as health care and education, disproportionate contact with the justice system, and lack of access to employment opportunities, plays a persistent and large role in historical disadvantage and supports the persistence of racial and ethnic health disparities.

Amount: TBD Match: No

The Emergency Triage, Treat, and Transport (ET3) model is a voluntary, five-year payment model that will provide greater flexibility to ambulance care teams to address emergency health care needs of Medicare Fee-for-Service (FFS) beneficiaries following a 911 Call. ET3 consists of three interventions: the two treat and transport interventions described in the Request for Applications and the triage intervention described in this Notice of Funding Opportunity (NOFO). Together, these interventions make up a comprehensive model for potentially improving the quality of care and lowering costs to Medicare by reducing avoidable transports to hospital emergency departments (EDs) and avoidable inpatient admissions. Through the ET3 Model NOFO, Centers for Medicare & Medicaid Services (CMS) will fund Recipients to establish or expand a Medical Triage Line. Eligible applicants are state and local governments, their designees, or other entities that operate or have oversight over an emergency communications center that receives 911 Calls. A Medical Triage Line funded through the ET3 Model will allow existing 911 systems to redirect Callers with non-emergency conditions to appropriate care alternatives.

The purpose of this Program is to strengthen occupational safety and health surveillance within states and other eligible jurisdictions to provide information that will help drive actions to improve the health of workers. This program will build upon existing state and local public health capacity and expertise in occupational safety and health surveillance to empower public health practitioners, health care providers, and others to make information-driven decisions that will improve the health of workers. For states and others where occupational safety and health surveillance capacity does not currently exist, this program may help to develop that capacity, NIOSH expects this NOFO to have meaningful impact on occupational safety and health surveillance, epidemiology, and public health. The goals of the program are the following: 1) Identify and access data that can be used to describe the state burden of work-related illnesses, injuries, exposures, and/or fatalities; identify trends and emerging issues; create occupational health indicators (OHIs); and use findings to calculate the incidence and/or prevalence of occupational injuries, illnesses, exposures, and/or fatalities; 2) set program priorities for follow-up activities, including more in-depth data surveillance and outreach, prevention, and/or intervention programs to address state priorities and emerging issues: 3) develop a broad network of partners who can assist in identifying data appropriate for occupational safety and health surveillance and in disseminating results; 4) develop and disseminate public health recommendations, interventions, and policies that can improve worker health and safety in their state; and 5) apply current technologies to develop and communicate audience-specific educational materials, outreach, and other resources for optimizing their uptake, adoption, or adaptation for protecting workers.

NIMH seeks applications for research projects to evaluate the effectiveness of service-ready tools and technologies that can be used to advance training, quality monitoring, and quality improvement efforts and ultimately improve the availability of evidence-based suicide prevention services. Specifically, this initiative encourages research on the effectiveness-implementation continuum aimed at (1) developing and testing the effectiveness of optimized, service-ready suicide prevention tools for identification, prevention, and treatment of individuals at risk for suicide; and (2) testing strategies to improve adoption, implementation fidelity, and sustained use of these tools, guided by an implementation science framework. Given the focus on practice-ready accessible resources and products that could be readily integrated into practice, NIMH encourages the use of technology and other design features that make the tools scalable and robust against implementation drift, and a deployment-focused approach that takes into account the perspectives of key stakeholders (e.g., service users, providers, administrators) and system-level factors, such as workforce capacity that influence potential integration of tools into clinical workflows.
