This initiative encourages research focused on development of and testing the effectiveness of intervention approaches that utilize enhanced interpersonal strategies to strengthen and compliment efforts in suicide prevention. Existing suicide prevention practices emphasize safety management protocols and intrapersonal coping skills but tend to focus less on strategies addressing interpersonal targets that contribute to suicide risk. The intent of this initiative is to develop and/or utilize interpersonal treatment strategies that reduce risk by enhancing perceived social supports and connections that contribute to life-affirming beliefs, intentions, and behaviors, in ways consistent with conceptual models of suicide risk, to enhance the effectiveness of existing evidence-based treatments and develop new approaches, as indicated.

NIMH seeks applications for research projects to evaluate the effectiveness of service-ready tools and technologies that can be used to advance training, quality monitoring, and quality improvement efforts and ultimately improve the availability of evidence-based suicide prevention services. Specifically, this initiative encourages research on the effectiveness-implementation continuum aimed at (1) developing and testing the effectiveness of optimized, service-ready suicide prevention tools for identification, prevention, and treatment of individuals at risk for suicide; and (2) testing strategies to improve adoption, implementation fidelity, and sustained use of these tools, guided by an implementation science framework. Given the focus on practice-ready accessible resources and products that could be readily integrated into practice, NIMH encourages the use of technology and other design features that make the tools scalable and robust against implementation drift, and a deployment-focused approach that takes into account the perspectives of key stakeholders (e.g., service users, providers, administrators) and system-level factors, such as workforce capacity that influence potential integration of tools into clinical workflows.
