City of Berkeley Secures $3.1 Million MTC Safe Routes to BART Grant for Ohlone Greenway Project

We are thrilled to announce that the City of Berkeley has been awarded $3.1 million from the Metropolitan Transportation Commission's (MTC) Safe Routes to BART Grant! This substantial funding will be used to support the Ohlone Greenway Project, enhancing safe and accessible pathways for pedestrians and cyclists traveling to and from the BART station.

The Ohlone Greenway is a vital community corridor and this grant will enable significant improvements to its infrastructure, promoting sustainability and safety for residents and commuters alike. The enhancements will include better lighting, pathway upgrades, and improved connectivity, all aimed at making it easier and safer for people to access public transportation.

California Consulting's Project Manager, Ilya Malinsky, played a pivotal role in editing and consulting on the grant application, and we are proud to have contributed to this success. Ilya Malinsky stated, *"I am proud to have supported the City's efforts in securing this crucial funding. The Ohlone Greenway Project will significantly enhance the safety and accessibility of the pathways connecting to BART, making a tangible difference for pedestrians and cyclists in Berkeley. It was a rewarding experience collaborating with the City of Berkeley."*

We extend our heartfelt congratulations to the City of Berkeley on this well-deserved achievement. This is a significant step forward in promoting sustainable transportation and improving the quality of life for the community.
