The goal is to reduce overall risk to the population and structures from future hazard events, while also reducing reliance on Federal funding in future disasters. This program awards planning and project grants and provides opportunities for raising public awareness about reducing future losses before disaster strikes. Mitigation planning is a key process used to break the cycle of disaster damage, reconstruction, and repeated damage. PDM grants are funded annually by Congressional appropriations and are awarded on a nationally competitive basis.

Environmental Protection Agency: Brownfield (Infill Development)

Deadline: TBA Amount: TBD Eligibility: TBD

Brownfield sites are often in infill locations with existing transportation and utility infrastructure. Redevelopment in infill locations can use vacant buildings, parking lots, or other underused sites for new amenities, homes, and businesses near existing neighborhoods. When infill development occurs near transit or employment centers, it can reduce the distance people need to drive and give them other transportation options.

Brownfields are underutilized properties where reuse is hindered by the actual or suspected presence of pollution. Cleanup and redevelopment of these sites benefits communities by removing the threats to human health and the environment, stimulating economic growth, and revitalizing neighborhoods. Urban infill brownfield redevelopment in neighborhoods with existing public infrastructure eliminates neighborhood blight and improves the community's image and long term sustainability. Infill development also increases property values, creates a potential for increased jobs, adds to local tax revenues and improves public health.

Goals of the Water Board Brownfields Program

- Expedite and facilitate brownfields' cleanups and closures by streamlining site assessment, remediation, monitoring, and closure requirements and procedures within the water boards' cleanup programs
- Preserve open space and green fields

Many fire and rescue departments in the U.S. are under-funded and volunteer-based. This lack of funding often means that critical on-scene safety and rescue equipment is wanting. To assist these agencies, we make grants to purchase needed equipment. Our focus is on 1) funding equipment that is critical to emergency scene life and safety, 2) helping a functional department to function better, and 3) providing equipment that can be shared on a regional basis.

U.S. Department of Health and Human Services: Rural Health Network Development Planning Program

Deadline: November 30, 2018

Amount: \$2.2 million for entire program

Match: No

Eligibility: To be eligible to receive a grant under this subsection, an entity - (A) shall be a rural public or rural nonprofit private entity; (B) shall represent a network composed of participants - (i) that include 3 or more health care providers; and (ii) that may be nonprofit or for-profit entities; and (C) shall not previously have received a grant under this subsection (other than a grant for planning activities) for the same or a similar project.

https://grants.hrsa.gov/2010/Web2External/Interface/FundingCycle/ExternalView.aspx?fCycleID=820ff0a2-594f-4944-81b4-54365531cab1

This notice announces the opportunity to apply for funding under the Rural Health Network Development Planning Program ("Network Planning"). The purpose of the Network Planning program is to assist in the development of an integrated health care network, specifically network participants who do not have a history of formal collaborative efforts in order to: (i) achieve efficiencies; (ii) expand access to, coordinate, and improve the quality of essential health care services; and (iii) strengthen the rural health care system as a whole. A rural health network is defined as an organizational arrangement among at least three separately owned regional or local health care providers that come together to develop strategies for improving health

services delivery systems in a community. Health care networks can be an effective strategy to help smaller rural health care providers and health care service organizations align resources and strategies, achieve economies of scale and efficiencies, and address challenges more effectively as a group than as single providers. For example, a critical access hospital, a community health center, and a public health department may collaborate to form a network around a shared purpose. Other examples of health care providers could be: hospitals, public health agencies, home health providers, mental health centers, substance abuse service providers, rural health clinics, primary care providers, oral health providers, social service agencies, health profession schools, local school districts, emergency services providers, community and migrant health centers, federally-qualified health centers, tribal health programs, churches, faith-based organizations, and civic organizations that are/will be providing health care. The goals of the Network Planning program are centered around approaches that will aid providers in better serving their communities given the changes taking place in health care, as providers transition from focusing on the volume of services to focusing on the value of services. The intent is that rural health networks will expand access to care, increase the use of health information technology, explore alternative health care delivery models, and continue to achieve quality health care across the continuum of care from prevention and wellness to acute and long-term care. The increasing focus on showing value in health care delivery creates incentives to develop regional systems of care that preserve local autonomy for rural communities while also ensuring access to the appropriate continuum of care for the local service population. It remains critical in the health care environment for rural providers to participate in efforts such as implementing population health strategies to demonstrate the quality and value they provide rural residents.

Scholarly Editions and Translations grants support the preparation of editions and translations of pre-existing texts of value to the humanities that are currently inaccessible or available only in inadequate editions or transcriptions. Typically, the texts and documents are significant literary, philosophical, and historical materials; but other types of work, such as musical notation, are also eligible. Projects must be undertaken by at least two scholars working collaboratively. These grants support sustained full-time or part-time activities during the periods of performance of one to three years. Projects should embody the best practices recommended by the Association for Documentary Editing (ADE) or the Modern Language Association (MLA) Committee on Scholarly Editions. Translation projects must also explain the theory and method adopted for the particular work to be translated. Editions and translations produced with NEH support contain scholarly and critical apparatus appropriate to their subject matter and format. This usually means introductions and annotations that provide essential information about a text's form, transmission, and historical and intellectual context. Proposals for editions of foreign language materials in the original language are eligible for funding, as well as proposals for editions of materials translated into English.

NEH is a national funding agency, so the projects that we support must demonstrate the potential to attract a broad general audience. The Division of Public Programs encourages media projects that promote a deeper understanding of American history and culture and advance civic education. The Division of Public Programs also supports media projects that examine international themes and subjects in the humanities. Film and television projects may be single films or a series addressing significant figures, events, or ideas. Production awards support the production and distribution of films, television programs, radio programs, or podcasts that promise to engage a broad public audience.

https://grants.hrsa.gov/2010/Web2External/Interface/FundingCycle/ExternalView.aspx?fCycleID=820ff0a2-594f-4944-81b4-54365531cab1

This notice announces the opportunity to apply for funding under the Rural Health Network Development Planning Program ("Network Planning"). The purpose of the Network Planning program is to assist in the development of an integrated health care network, specifically network participants who do not have a history of formal collaborative efforts in order to: (i) achieve efficiencies; (ii) expand access to, coordinate, and improve the quality of essential health care services; and (iii) strengthen the rural health care system as a whole. A rural health network is defined as an organizational arrangement among at least three separately owned regional or local health care providers that come together to develop strategies for improving health services delivery systems in a community. Health care networks can be an effective strategy to help smaller rural health care providers and health care service organizations align resources and strategies, achieve economies of scale and efficiencies, and address challenges more effectively as a group than as single providers. For example, a critical access hospital, a community health center, and a public health department may collaborate to form a network around a shared purpose. Other examples of health care providers could be: hospitals, public health agencies, home health providers, mental health centers, substance abuse service providers, rural health clinics, primary care providers, oral health providers, social service agencies, health profession schools, local school districts, emergency services providers, community and migrant health centers, federally-qualified health centers, tribal health programs, churches, faith-based organizations, and civic organizations that are/will be providing health care. The goals of the Network Planning program are centered around approaches that will aid providers in better serving their communities given the changes taking place in health care, as providers transition from focusing on the volume of services to focusing on the value of services. The intent is that rural health networks will expand access to care, increase the use of health information technology, explore alternative health care delivery models, and continue to achieve quality health care across the continuum of care from prevention and wellness to acute and long-term care. The increasing focus on showing value in health care delivery creates incentives to develop regional systems of care that preserve local autonomy for rural communities while also ensuring access to the appropriate continuum of care for the local service population. It remains critical in the health care environment for rural providers to participate in efforts such as implementing population health strategies to demonstrate the quality and value they provide rural residents.
