In 2018, OPSA launched an effort to develop of a quantitative system-dynamic model of the opioid crisis to help FDA a) understanding the complexity of the interconnected mechanisms of the crisis, and b) assess potential impacts (intended and unintended) of possible policy actions to address the crisis. In Sept 2019, OPSA awarded a 1-year cooperative agreement (Harvard/Mass General; FDA's RFA-FD-19-026) to complete an initial version of the model ready for policy analysis, and in Aug 2020, OPSA awarded a 1-year cooperative agreement (Harvard/Mass General; FDA's RFA-FD-20-031) to account for societal outcomes beyond overdose as well as cost-effectiveness of potential policies. The current proposal will expand the FDA's model to more comprehensively incorporate fentanyl, stimulants and polysubstance use and their interactive effects on opioids use, misuse, addiction, use disorder treatment, and associated outcomes. The main focus of this project would be on modeling the growing number of opioid overdose deaths involving people who are primarily stimulant or polysubstance users, as an important emerging aspect of the opioid crisis. The research will also include quantification of the effects of harm reduction approaches (e.g., naloxone distribution to opioid users, increasing treatment availability for Opioid Use Disorder [OUD]) on

overdoses involving fentanyl and other polysubstance use. Additionally, the research will identify and incorporate aspects of mental health that are feasible for inclusion into the model.

The HHS Office of Minority Health is offering funding to support State and local collaborative teams in implementing a methodological framework and strategies for assessing and addressing structural racism in health policies, developed through a complementary policy academy initiative. In particular, awardees will: (1) Obtain governmental and public buy-in for engaging in this policy collaborative endeavor; (2) Create a multi-sector team (e.g., comprised of leadership from the governor's/mayor's office and health, behavioral health, child welfare, justice, education, commerce, community service and other agencies, and from community organizations); (3) Conduct a review of existing policies to identify the areas primed for a structural racism assessment; (4) Develop or revise a policy (or policies) to address structural racism and improve health outcomes; (5) Implement the new/revised policy and evaluate its impact on health outcomes for racial and ethnic minorities within their jurisdiction; and (6) Create and implement strategies to communicate, sustain and spread policies resulting in improved health outcomes for racial and ethnic minorities. BACKGROUND: Racial and ethnic minority populations experience a number of disparities which contribute to poor health outcomes. Structural racism, evidenced in residential segregation, inequitable allocation and quality of services and resources such as health care and education, disproportionate contact with the justice system, and lack of access to employment opportunities, plays a persistent and large role in historical disadvantage and supports the persistence of racial and ethnic health disparities.

Healthy urban & community forests and green infrastructure are not only critical to all our nation's forests, but also essential to the economic, environmental, physical, and mental well-being of our population. Increasingly, our urban and community forests are facing threats such as insects, diseases, extreme weather events and other hazards. Additionally, the lack of investment in urban forest disaster mitigation is contributing to community disasters such as urban flooding and human heat deaths in our cities-- disproportionately affecting vulnerable populations. New systemic solutions are needed to create and enhance green infrastructure in the right place and at the right scale and encompass pressing social, economic, ecological, and historic factors holistically.

Grant Categories include:

- Increasing Resiliency of Urban Forests through Reforestation and Management

By generating more knowledge about strategies for serving victims and holding offenders accountable, communities that benefit from VAWA funding will be better equipped to align their work with practices that are known to be effective, and they will be more capable of generating empirical knowledge on the efficacy of new and promising ways of doing things. The initiative is designed to support researcher-practitioner partnerships and a broad range of research and evaluation methods, including qualitative, mixed-method, and quasi-experimental, and experimental designs. For states and others where occupational safety and health surveillance capacity does not currently exist, this program may help to develop that capacity. NIOSH expects this NOFO to have meaningful impact on occupational safety and health surveillance, epidemiology, and public health. The goals of the program are the following: 1) Identify and access data that can be used to describe the state burden of work-related illnesses, injuries, exposures, and/or fatalities; identify trends and emerging issues; create occupational health indicators (OHLs); and use findings to calculate the incidence and/or prevalence of occupational injuries, illnesses, exposures, and/or fatalities; 2) set program priorities for follow-up activities, including more in-depth data surveillance and outreach, prevention, and/or intervention programs to address state priorities and emerging issues; 3) develop a broad network of partners who can assist in identifying data appropriate for occupational safety and health surveillance and in disseminating results; 4) develop and disseminate public health recommendations, interventions, and policies that can improve worker health and safety in their state; and 5) apply current technologies to develop and communicate audience-specific educational materials, outreach, and other resources for optimizing their uptake, adoption, or adaptation for protecting workers.

NIMH seeks applications for research projects to evaluate the effectiveness of service-ready tools and technologies that can be used to advance training, quality monitoring, and quality improvement efforts and ultimately improve the availability of evidence-based suicide prevention services. Specifically, this initiative encourages research on the effectiveness-implementation continuum aimed at (1) developing and testing the effectiveness of optimized, service-ready suicide prevention tools for identification, prevention, and treatment of individuals at risk for suicide; and (2) testing strategies to improve adoption, implementation fidelity, and sustained use of these tools, guided by an implementation science framework. Given the focus on practice-ready accessible resources and products that could be readily integrated into practice, NIMH encourages the use of technology and other design features that make the tools scalable and robust against implementation drift, and a deployment-focused approach that takes into account the perspectives of key stakeholders (e.g., service users, providers, administrators) and system-level factors, such as workforce capacity that influence potential integration of tools into clinical workflows.

Recipients will implement a set of activities under at least one of the three capacity-strengthening areas below (See Section IV.2 for details) and through these activities address an emerging issue specific to their state or local community. Capacity Areas: 1) Data and Informational Systems 2) Workforce Development 3) Strategic Partnerships "Emerging issues" refers to issues that affect MCH populations at an increased rate, for which there is new knowledge or an increased level of awareness of, or there are new approaches to solving the issue. The challenge is that these issues are difficult to anticipate and thus difficult for which to have funds set aside. Through this program, the HRSA Maternal and Child Health Bureau (MCHB) aims to increase the ability of states and local communities to anticipate, prepare, and execute timely responses to emerging issues to reduce their negative impact on MCH populations. You will select an emerging issue specific to the needs of your state or local community. Examples of emerging issues include, but are not limited to, increasing rates of opioid and other substance use disorders, emergent environmental health threats, persistent or increasing disparities in maternal mortality, inadequate availability of and access to behavioral health services, disparities in access to health services for CSHCN, and declining immunization coverage. NIMH seeks applications for research projects to evaluate the effectiveness of service-ready tools and technologies that can be used to advance training, quality monitoring, and quality improvement efforts and ultimately improve the availability of evidence-based suicide prevention services. Specifically, this initiative encourages research on the effectiveness-implementation continuum aimed at (1) developing and testing the effectiveness of optimized, service-ready suicide prevention tools for identification, prevention, and treatment of individuals at risk for suicide; and (2) testing strategies to improve adoption, implementation fidelity, and sustained use of these tools, guided by an implementation science framework. Given the focus on practice-ready accessible resources and products that could be readily integrated into practice, NIMH encourages the use of technology and other design features that make the tools scalable and robust against implementation

drift, and a deployment-focused approach that takes into account the perspectives of key stakeholders (e.g., service users, providers, administrators) and system-level factors, such as workforce capacity that influence potential integration of tools into clinical workflows.
