

## American Cancer Society – South Region 2021 Continuing Education Series (Return To Screening Series)

### **RECORDING-Getting Back on Track After the Impact of COVID-19: HPV Vaccination and Cervical Cancer Screening Guideline Updates**

This CE activity is the first of the 3 part webinar series that will provide an overview and guidance on how to safely resume and promote cancer screening during the COVID-19 Pandemic. Information includes evidence-based strategies for the updated ACS Recommendations for Cervical Cancer Screening and HPV Vaccinations, discuss impact of COVID-19 on adolescent immunization, and best practices including resources for getting back on track. Access to the [recording](#). Certificate available after completing post assessment.

### **RECORDING-Resuming Colorectal Cancer Screening During the Pandemic: Best Practices and Recommendations**

This CE activity is part 2 of the webinar series. Despite the challenges we face during the pandemic, colorectal cancer remains a public health priority, and we must provide the public with safe opportunities to prevent and detect colorectal cancer. This webinar is designed to provide strategies for safely resuming and promoting CRC cancer screenings to your patients. Access to the [recording](#). Certificate available after completing post assessment.

### **RECORDING-Breast Health Equity: Reducing Structural Barriers**

This CE activity is part 3 of the webinar series. This webinar brought together subject matter experts to share EBIs, equity-oriented methods, and a call to action to safely resume and promote screening in the community to reduce breast cancer disparities. Access to the [recording](#). Certificate available after completing post assessment.

# Professional Education Resources and Continuing Education Offering

## Safely Resuming and Promoting Cancer Screening During the COVID-19 Pandemic Resources

The purpose of this report is to summarize the current state of research and findings available and to provide guidance on how public health agencies, health care providers, and screening advocates across the nation can promote and deliver cancer screening appropriately, safely, and equitably during the COVID-19 pandemic.

## Weighing Treatment Attributes in DLBCL, FL, and CLL

This modular CME activity, including interactive reflective prompts and a resource library, explores important treatment attributes of non-Hodgkin lymphomas, specifically diffuse large B-cell lymphoma, follicular lymphoma, and chronic lymphocytic leukemia. Expert faculty also provide comparative analyses of available treatments based on efficacy, safety, route of administration, dosing schedule, and potential adverse events.
