The AIoT Value Proposition

Helium (LongFi)

Solar

LED Lighting

Air Filtration

HVAC

Electricity & Gas

**Water
& Waste Management**

**Vehicle
Charging Stations**

Building Controls

Devices (Sensors)

## Sustainability is NOW profitable with increased NOI (Net Operating Income) & ESG!

"We tapped Abundant IoT to become more efficient on our campus. We now have sensors in the facility to identify leakage when it happens not months later and valves that reduce water use by over 30%! We put in a microgrid (Enphase battery back up connected to solar system) and no longer have an electricity bill due and we will never be without power again! The wireless mesh system enables complete automation, security and signal throughout our property which has solved major communication issues. Finally, we put in LED Lighting in facilities and in our parking structures and we also now have EV Charging stations. The Abundant IoT Team identified the issues and provided the best solutions for our facilities."
