

Career and Technical Education can act as a gateway for students to enter into authentic learning environments, not only in the classroom but also through work-based learning experiences. Students taking Family and Consumer Sciences (FCS) courses have the opportunity to be exposed to potentially hundreds of careers within its program pathways. Perkins V legislation has also put emphasis on these real-world experiences for students in all CTE programs.

In this session, participants will learn about the use of Individual Career and Academic Plans (ICAP) to provide students with holistic opportunities that engage them in career exploration and development. Presenters will share a variety of ways to engage your students in and out of the classroom, including various methods to provide virtual work-based learning opportunities. Examples and resources will be provided for participants
