

MOBITRAC

Weeder's Digest is proud to introduce the Mobitrac amphibious tool carrier. Built in the Netherlands to be versatile and reliable, the Mobitrac is used to manage eco-sensitive waterways and wetlands the world over!

The Mobitrac can operate in ANY amphibian environment and typical of Dutch engineering the comfort and safety of the operator is of as much importance as the function of the machine itself. Simply put, the Mobitrac is the aquatic maintenance solution of choice for lakeshore management, subcontractors, municipalities, government, conservation management, and golf courses alike!

The Mobitrac is amazingly maneuverable on land and water and allows the operator to work in hard to access areas like retention ponds, wetlands, river embankments, and canals. Depending on your needs the Mobitrac is here to service the waterways of North America using a wide array of quick-connect attachment tools to cut and collect aquatic vegetation, excavate, dig, or dredge. The Mobitrac can even be used for suction dredging environmental hazards like toxic algae and oil spills.

Regardless of the amphibious challenge, the Mobitrac is the aquatic weed management and environmental control machine to do the job!

Weeder's Digest is the exclusive North American distributor for the Mobitrac and we look forward to providing you with the aquatic solution you need! Call toll-free to schedule your demonstration today.
