

Nisa Vinodkumar is Assistant Professor Finance at the College of Business and Administration, Princess Nourah Bint Abdulrahman University, Riyadh, Saudi Arabia. She has 18 years of work experience in academia and industry and currently teaches Advanced Project Management, Project Management, Risk Management, Corporate Finance, Financial Markets, Financial Modelling, Digital Innovation Creativity and Enterprise, Management Information System.

She shares with us:

I carry with myself a strong desire to empower the student community to bring out the best in them by enabling them to enhance their learning and development skills. I always encourage my students to be the change agents of tomorrow and be there as an informed facilitator to guide the younger generation to contribute towards the development of the society in the form of financial literacy, financial planning, climate literacy, carbon literacy etc. The youths in Saudi Arabia when motivated in the right direction with the knowledge about the development of their country and the areas of advancements, will contribute better.

I did my MBA at Cochin University of Science and Technology (India) in 2003. I joined Princess Nourah bint Abdulrahman University in 2018 and I am continuing here.

My PhD topic was “ A study on savings pattern and creation of an investment portfolio for bottom of the pyramid women self-help groups in Kerala, India”.

I had been encouraging my faculty members to link SDGs to their community services engagements and based on the learning experiences gained our faculties have now started linking SDGs to the courses. Our college has become a signatory member of PRME in February 2023 and a team has been formed at the CBA level under the leadership of our Dean. I am heading the Sustainability Committee in the College. It is in this regard that I have applied to the PRME WG on sustainability mindset and shall be encouraging our interested team members to be part of this

WG. It's very interesting to be able to contribute towards the sustainable development of our teaching and learning.

The active learning of the participants can be fostered only through right industry engagements in the form of project-based learning. The learning environment in our college is very positive and is open to all creative ideas that will enhance students active learning.

The support of the Sustainability mindset team and the exposures that I am eagerly waiting to explore will definitely help me to pass on the best to my students. I wish my students to be a part of this sustainability mindset too, where they are also given an opportunity to express their ideas, their learnings etc.
