

Midwest AUTO CARE ALLIANCE

Unlock your Diagnostic Potential Utilizing the PicoScope 4425A

In-Person Technical Training
With Kevin Leiby

Technologies in our ever-changing world are advancing at a remarkable pace, and the wonderful thing about advancing technologies is that our test equipment advances as well. Our service bays are full of vehicles with problem vehicles that can present diagnostic challenges, especially if we are not taking advantage of the equipment available to us to overcome these challenges. This class is designed to unlock your diagnostic potential and streamline your diagnostic approach. Following is a list of the class objectives:

- Understand the benefits of Oscilloscope usage on today's vehicles and learn proper hook-up and set up for proper signal acquisition
- Discuss Voltage and Time base settings
- What is a Trigger, what type and when to utilize one
- What is Trigger Slope, Rising (Positive) or Falling (Negative)
- How to perform a variety of measurements on your scope and learn to utilize degree, time and rotational markers
- How to store and recall files saved, to build a library
- Learn how to synch a signal to optimize diagnostic time
- Combine signals to maximize diagnostic power
- Learn how to quickly ascertain engine mechanicals
- How to quickly confirm fuel delivery, system & component integrity and how to interpret the information contained in the waveform
- And much more - see event registration page for more info!
