

# Vehicle Communications Network Diagnostics

presented by Delphi Technologies

In-Person training with  
Dave Hobbs

Individuals communicate via thousands of languages spoken across the world. And nowadays, vehicles are no different. Their digital network of “languages” within the car or truck system, controlling just about everything bumper to bumper – not to mention, “talking amongst themselves” (V2V). Technicians taking this course will get the “MOST” out of this three - hour course, along with other networking communication strategies. Scan tool and lab scope applications, case studies feature isolation tips and wiring repair round-out this all-important course for the diagnostic technician.
