Air Conditioning Diagnostics & Repair

presented in person
by Mark Dufort

This course, delivered by MACS Certified Instructor, brings the professional technician up-to-date on the latest air-conditioning diagnostic techniques, service and repair practices. During the course, participants will:

- o Understand the various HVAC system designs
- o Discuss avenues for taking the 609 Certification Test
- o Know the operating characteristics of various refrigerants and oils
- o Understand computer controls used in air conditioning systems
- o Comprehend various diagnostic testing techniques and identify tools necessary to service, maintain, and diagnose air conditioning systems
