Current Probes: Ramp Up Your Diagnosis

In-Person Training with
Kevin Leiby,
Leiby's Automotive Training

This class is all about taking advantage of the power of your oscilloscope coupled with an amp clamp to see what is really going on within the circuit and component operation. Beginning with a thorough understanding of circuit construction and operation we can build a fast, efficient, accurate, non-intrusive and dynamic approach to circuit and component testing.

We have all at one point, had that vehicle where we may have struggled to duplicate the condition or get the problem to present itself. The oscilloscope coupled with an amperage probe can often reveal problems you are not even aware of yet or uncover the problem even when it is happening so fast you don't even realize it is occurring. Come learn to unlock this Diagnostic Duo to add another powerful tool to your diagnostic arsenal to uncover unwanted resistance within a circuit or component. Uncover component deficiencies even before failure occurs and find sources of those hard-to-find intermittents. Utilize these procedures for fast and accurate confirmation of component and circuit operation post repair.

Kevin Leiby has been an automotive technician for over 40 years and began his career as an automotive technician in 1976 as a Ford dealer tech. After 14 years as a dealer technician in multiple dealerships, acquiring experience on almost all makes of vehicles, he opened his own service and repair facility which he operated for 23 years. Since then, he has been training across the country with multiple companies, including his own, Leiby's Automotive Training.

Thursday, November 18, 2021

6:30 - 9:00pm

All Star Automotive
7 N First Street
Columbia, MO 65203

Members \$55
Non-Members \$75

includes dinner and
training

for shop
owners &
technicians
