

Anti-Lock Brake, Stability Control, and Traction Control

In-person training with,
Chris Ellington, BOSCH

This course helps technicians become more familiar with Anti-lock Brake (ABS), Stability Control (ESC) and Traction Control Systems (TCS). Gaining a better understanding of how these systems operate enables technicians to become more efficient in system diagnostics and repair.

During the course, participants will:

- o Discuss some of the more complex systems such as hybrid brake-by-wire, torque management and total system integration including CAN communications
- o Understand the differences between anti-lock brake hydraulic channel systems and how they are used
- o Understand the correct methods for performing anti-lock brake and traction control system diagnostics
- o Discuss common electronic stability control problems
