

# Getting to Know the Labscope

**In-person training  
with Josh Weaver**

Whether you're just getting started with lab scopes or looking to sharpen your skills, this comprehensive training course has something for everyone in the shop. Designed for both entry-level technicians and experienced diagnosticians, this class demystifies the lab scope and gives you the confidence to use it effectively in real-world diagnostics.

You'll learn how to properly connect and configure lab scopes from all major manufacturers, adjust the display for clear signal readings, and—most importantly—interpret what you're seeing on the screen to diagnose drivability issues, sensor faults, ignition problems, and more.

Expect real-world examples, and tips you can apply immediately in the bay. If you're serious about boosting your diagnostic accuracy and cutting down on guesswork, this is the class that puts the power of lab scopes into your hands.

Let's get dialed in!
