

Wichita Chapter

BG Tech Talk: Equipment and Best Practices for Maintenance Efficiency and Effectiveness

Hosted by BG Kansas and Spiro Morogiannis, Training Program Manager

The automotive service industry has changed dramatically over the past 25 years, but one thing remains the same: skilled technicians are essential to a successful repair facility. As vehicles continue to age and become more complex, shops have more opportunities than ever to help customers protect their investment through proper maintenance.

For maintenance services to be successful, shops need three key elements in place:

1. Maintenance recommendations must be easy to identify, quote, explain, and process.
2. Multipoint inspections must be thorough, timely, and consistent.
3. Technicians must have the tools, training, and procedures needed to perform services efficiently and correctly.

This training class will focus on practical strategies for improving maintenance processes in the shop. Attendees will review multipoint inspection best practices, see live demonstrations of current BG equipment, fittings, and procedures, and discuss recommended service intervals and OEM maintenance trends. Join the Wichita Chapter of MWACA for an informative evening hosted in partnership with Kansas BG at BG Products' international headquarters in Wichita. The evening will feature special guest speaker Spiro Morogiannis, Training Program Manager for BG Products.

Tuesday, Sept 15, 2026

6:30-8:30pm

BG Products
TTC Room
740 S Wichita
Wichita, KS 67213
