

Understanding and Diagnosing Air Conditioning

in-person training with
Dorman

Sponsored by:

This course goes beyond minimum requirements for recovery, evacuating, recharging, and recycling by offering real world examples in diagnosing and repairing A/C electrical, computer / BCMs, Climate control and electronic components. Most of today's vehicles come equipped with electronically controlled A/C systems. Auto AC systems have become more difficult to diagnose using the repair strategies learned from years of servicing R12 and R134a systems. This class will cover operation and service of today's and tomorrow's air conditioning systems including R1234yf.
