

Cedar Rapids Chapter

Streamlining Engine Mechanical Testing

Presented in person
by: Kevin Leiby

Saturday, October 10

8:00am-5:00pm

Just Automotive
2163 M Ave
Williamsburg, IA 52361

We are experiencing an increase of vehicles in our service bays today with driveability complaints that are eventually traced back to a mechanical base engine problem. The problem is that these vehicles often arrive with a Check Engine lamp on with a DTC stored for a sensor or circuit performance issue, due to the sensor input being skewed or falling outside normal thresholds for the sensor. Often times, time and money has been spent in an attempt to repair the DTC, only to find the problem still exists. This is due to the sensor input is falling outside normal ranges due to engine mechanical conditions.

Come learn how to utilize your Oscilloscope, coupled with various probes or sensors to maximize your diagnostic time to efficiently pinpoint base engine mechanicals. Bring your Oscilloscope, Amp Probes, Ignition Probes and Pressure Sensors and Transducers and let's learn to take advantage of the power of your scope and accessories to Streamline Engine Mechanical Testing.

This class will begin with classroom instruction followed by hours of on the vehicle testing. Regardless of which scope you have, learn to maximize your diagnostic time.
