DON'T MISS THESE SESSIONS!!!!

1:00 PM – 2:00 PM Panel Discussion | Cargo Theft | How to Insure Yourself and Your Materials

2:15 PM – 3:00 PM Panel Discussion | Rare Earth Emerging Markets & Opportunities

Rare earth elements are part of critical minerals that are increasingly recognized as strategically important, recycled materials, but turning that recognition into a viable domestic supply chain requires more than demand. It requires collection, processing, technology, investment, markets, and collaboration across the value chain. The panel brings together industry perspectives on the emerging opportunity for rare earth recovery and recycling from automotive to consumer goods. In this session, we will explore where meaningful opportunities exist today, what barriers remain, and how recyclers, manufacturer, technology providers, government, and downstream users can position themselves for the evolving critical materials economy.

3:15 PM – 4:00 PM Panel Discussion | What's Brewing in the States - Why it Matters to Business

State legislative activity continues to shape the operating environment for businesses across the industry. This session will provide a snapshot of recent state policy developments, highlight key legislative trends emerging across the states, and identify issues to watch.
