Forecast Confidence

June 17, 2025
10:36 AM

Location

Low	Medium	High
-----	--------	------

Confidence is high that much of the area will see rain, though some uncertainty remains regarding exactly where the strongest storms will develop. At this point, the most likely area of severe storm development appears to be across central and south-central Kansas.

Timing

Low	Medium	High
-----	--------	------

Confidence is high in storms developing sometime after 3 PM and lasting through early Wednesday morning.

Magnitude

Low	Medium	High
-----	--------	------

Confidence to this point is high that the strongest storms (especially during the afternoon and early evening) will be capable of up to tennis ball sized hail, 80+ mph wind gusts, and a few tornadoes. Additionally, confidence is medium-high in the potential for heavy rainfall causing flooding concerns heading into the overnight hours.

Are You Prepared?

- ✓ Know your safe place.
- ✓ Pack an emergency kit.
- ✓ Write a family communication plan.
- ✓ Conduct drills at home and work.
- ✓ Have multiple sources for warnings.
